

Team 1: Dennis, Jonessa, Yahya

Work Cited:

1. IS Partners, LLC. (n.d.). Healthcare cybersecurity statistics 2024. Retrieved April 27, 2025, from <https://www.ispartnersllc.com/blog/healthcare-cybersecurity-statistics/>
 - a. Used different statistics showing that over 92 percent of healthcare organizations experienced at least one cyberattack in the past year and that the average cost of a healthcare cybersecurity compromise was \$4.74 million.
2. Varonis. (2024). 38 must-know healthcare cybersecurity stats. Retrieved April 27, 2025, from <https://www.varonis.com/blog/healthcare-cybersecurity-statistics>
 - a. Used data indicating a percent of all cyberattacks against healthcare industries are phishing scams and that percent of healthcare workers opened phishing emails during 2024.
3. TechTarget. (n.d.). Denial-of-service (DoS) definition. Retrieved April 27, 2025, from <https://www.techtarget.com/searchsecurity/definition/denial-of-service>
 - a. Used the detailed definition of DDoS attacks and explanation of how volumetric, protocol-level, and application-layer techniques overwhelm healthcare networks and systems.
4. The HIPAA Journal. (2025, April). Healthcare data breach statistics. Retrieved April 27, 2025, from <https://www.hipaajournal.com/healthcare-data-breach-statistics/>
 - a. Used to find different types of HIPAA protection data and how data breaches can affect privacy of data.
5. U.S. Department of Health & Human Services. (2023). Ransomware & healthcare: A guide for security professionals [ransomware-healthcare.pdf]. Retrieved April 27, 2025, from <https://www.hhs.gov/sites/default/files/ransomware-healthcare.pdf>
 - a. Used the description of ransomware mechanics in healthcare settings, common infection vectors (phishing, exploit kits), and key mitigation best practices for hospitals.
6. IBM. (2024, September). Ransomware on the rise: Healthcare industry attack trends 2024. Retrieved April 27, 2025, from <https://www.ibm.com/think/insights/healthcare-industry-attack-trends-2024>
 - a. Used data revealing that healthcare's average breach recovery cost was \$9.77 million (the highest of any sector) and analysis of ransomware's role in driving those costs.
7. Lord, Robert, and Dillon Roseen. "Why Should We Care?" *Do No Harm 2.0*, New America, 2019, pp. 15–23. *JSTOR*, <http://www.jstor.org/stable/resrep19972.6> . Accessed 23 Apr. 2025.
 - a. This resource describes the many factors that attribute healthcare to being such a high risk with cyber crime. They go into the many ways that hospitals obtain information and how in depth that information has to be. They also emphasize how cyber security isn't a heavy focus on the hospitals part, but on the patients

part. Cyber security can be a patient's saving grace or ultimate harm depending on how it is handled with the hospital.

8. Wigger, Johannes. *The Impact of COVID-19 on Cyber Crime and State-Sponsored Cyber Activities*. Konrad Adenauer Stiftung, 2020. JSTOR, <http://www.jstor.org/stable/resrep25300> . Accessed 23 Apr. 2025.
 - a. Covid is a huge example for when cybersecurity was heavily needed and when cyber crime became a much bigger issue. I will use it to show the prevalence of cybercrime towards the healthcare system.
9. Martin, Guy, et al. "Cybersecurity and Healthcare: How Safe Are We?" *BMJ: British Medical Journal*, vol. 358, 2017. JSTOR, <https://www.jstor.org/stable/26950051> . Accessed 27 Apr. 2025.
 - a. This doc gives an introduction to cyber crime and how it affects the healthcare system. I will use it for some statistics to ground where the issue is coming from.
10. Peters, Allison, and Anisha Hindocha. *US Global Cybercrime Cooperation: A Brief Explainer*. Third Way, 2020. JSTOR, <http://www.jstor.org/stable/resrep25041> . Accessed 28 Apr. 2025.
 - a. This gives more information on recent events with cyber crimes especially during covid and how that financially affected us. This source will be used to give better more recent statistics on these things.
